

AMS 700™

Inflatable Penile Prosthesis

The most popular AMS Men's Health prosthesis

The AMS 700 Penile Prosthesis product line

The AMS 700 Prosthesis has an overall patient and partner satisfaction rate of 92% and 96%, respectively¹

Excellent girth expansion • Exceptional rigidity • Natural appearing flaccidity

Available with or without preconnected cylinders and pump for either an infrapubic or penoscrotal approach. Offering a combination of features focused on both surgeon and patient satisfaction.

Designed for ease of implant / Ease of use

Conceal™ Low Profile Reservoir

- ▶ Parylene coated to improve long-term durability of the device²
- ▶ Optimizes fit to offer a sleek, flexible solution

Cylinder and Rear Tip Extender (RTE) Design

- ▶ Reduced proximal profile designed to ease placement into proximal corpora even in difficult to dilate cases³
- ▶ Snap-fit RTEs designed to optimize fit and provide a secure, rigid connection
- ▶ Broad range of RTE lengths designed to custom fit patients (available in 0.5 cm increments, ranging from 0.5-7.5 cm)

Momentary Squeeze (MS) Pump

- ▶ One-touch button designed for deflation and ease of use
- ▶ Lock-out valve designed to resist auto inflation

InhibiZone™ Antibiotic Surface Treatment

- ▶ Only antibiotic-impregnated inflatable penile prosthesis on the market⁴
- ▶ Designed to create a zone of inhibition effective against the bacteria commonly associated with inflatable penile prosthesis infections⁵
- ▶ Provides a significant reduction in rate of revisions due to infection⁵

Important safety information⁵

- ▶ Not for patients with urogenital infections or active skin infections in region of surgery
- ▶ InhibiZone Treatment version of this device is not for patients with known allergy or sensitivity to rifampin (rifampicin) or to minocycline, or other tetracyclines
- ▶ Will make latent natural or spontaneous erections, as well as other interventional treatment options impossible. Penile shortening, curvature or scarring may result.
- ▶ Patients with diabetes, spinal cord injuries or open sores may have an increased risk of infection associated with a prosthesis

AMS™
MEN'S HEALTH

AMS 700™ LGX Inflatable Penile Prosthesis

AMS Men's Health exclusive: Cylinders designed to optimize Length and Girth eXpansion with up to 20% elongation possible, depending on patients' anatomy¹

Product	InhibiZone™ item number
LGX Preconnect MS 12 cm, PS, IZ	72404250

Caution: Federal Law (U.S.) restricts this device to sale by or on the order of a physician.

Caution: The law restricts these devices to sale by or on the order of a physician.

Prior to use, please review the Instructions for Use for a complete listing of indications, contraindications, warnings, precautions and potential adverse events.

Indications for Use: The AMS 700™ Series Inflatable Penile Prosthesis product line is intended for use in the treatment of chronic, organic, male erectile dysfunction (impotence).

Contraindications: The AMS 700 Series Inflatable Penile Prostheses are contraindicated in the patients that have active urogenital infections or active skin infections in the region of surgery or (for the AMS 700 prosthesis with InhibiZone™ Antibiotic Surface Treatment) have a known sensitivity or allergy to rifampin, minocycline or other tetracyclines, or patients with lupus erythematosus because minocycline has been reported to aggravate this condition.

Warnings: Implantation of the device will make latent natural or spontaneous erections, as well as other interventional treatment options, impossible. Men with diabetes, spinal cord injuries or open sores may have an increased risk of infection associated with the implantation of a prosthesis. Failure to evaluate and promptly treat erosion may result in a substantial worsening of the condition leading to infection and loss of tissue. Implantation may result in penile shortening, curvature, or scarring. Pre-existing abdominal or penile scarring or contracture may make surgical implantation more complicated or impractical. If a hypersensitivity reaction develops to a device coated with InhibiZone, the penile prosthesis should be removed and the patient treated appropriately.

Precautions: Migration of the device components can occur if the cylinders are improperly sized, if the pump or the reservoir is not positioned properly, or if the tubing lengths are incorrect.

Potential Adverse Events: May include device malfunction/failure leading to additional surgery, device migration potentially leading to exposure through the tissue, device/tissue erosion, infection, unintended-inflation of the device and pain/soresness.
